ÖLFLEX® HEAT 1565 SC

Application

ÖLFLEX® HEAT 1565 SC cables ensure the power supply of electric circuits at extremely dangerous locations, e.g. blast furnaces, coke mills, oil refineries, glassworks, aluminium- and steel works etc. The maximum admissible temperature is thereby up to +1565°C (short-time). The outstanding heat-proved quality and flame resistance guarantee the function even at contact with melted metal or glass for short-term. The cable is only suitable for installation in dry areas.

The single core cables are halogen-free and flame retardant.

Design

Conductor fine wire strands of nickel-plated copper, acc. to IEC 60228 resp. VDE 0295, Class 5

Insulation Several layers of Mica tape

Outer sheath Glass fibre braid with special impregnation

red (change of colour allowed)

Electrical properties at 20°C

Test voltage 2000 V AC

Mechanical and thermal properties

Minimum bending radius occasional flexing at max. +260 °C 15 x cable Ø fixed installation: 5 x cable Ø

Temperature range -195°C up to +400° C max. conductor temperature

Short-term: up to +1565 °C

General requirements

These cables are conform to the EU-Directive 2014/35/EU (Low Voltage Directive)
